

Choosing the mode, CMRT (Conflict Minerals Reporting Template) or (CRT) Cobalt Reporting Temple:

It is very simple:

From the Addins menu choose the mode you would like.

Then you will be prompted for unused template to choose as the default (this is necessary for reference). For ease, the templates from the RMI have been included in this zip.

RMI_CMRT

OR

RMI_CRT

If using the MRPRO dashboard for Responsible Minerals Initiative, in the main console on the top right you should see the default mode chosen. Always, ensure you are operating in correct mode.

When prompted for version of mrpo51 to save, always choose the xls (97-2003) format for best results and full compatibility.
