

Sample example instructions for rollups Excel templates feature:

Important points:

1. download and extract the files to c:\mrp51
2. Make sure the addin (mrpro517.xla) is activated by checking in Excel, Addins, manage.
3. set c:\mrp51 and all subfolders as trusted locations in Excel
After step 3 launch Mrpro from the addins after opening Excel (that should open a workbook called mrpro51 OR if that doesn't work, close Excel and launch MRPRO by double clicking on the mrpro file with the .exe extension), then choose CMRT mode from the addins- at that point to the latest CMRT version provided in the zip.
4. Load all cmrts into a subfolder of c:\mrp51
5. Use the addins to load those file names into Sheet AF
6. then do a Excel rollup using the button for that.
7. the Excel based rollup may take a while as it checks all fields, but it will be done to fruition .

For other features follow similar steps but use button(s) for those features, such as load xml files where xml rollup is required and using xml rollup button.
