Hope you are doing well.

You were right. If I copy «out of Firefox» and insert with unicode into excel everything works easy perfectly.
So, I'm perfectly happy also since the XML procedure works so fast.
It is worthwhile the time to spend to convert all the files to *.xml.

Also I like the feature to find the Manufacturer by a specific smelter for example.
I just needed that function. It was fast and exactly what I expected.

I'm just happy now.

Many thanks and best regards
Toni
